

Oracle EBS Migration for Tire Distribution Company

Client Profile

The Client is one of the largest tire distributors in North America with over 10 million square feet of inventory across the United States and Canada. The client distributes tires to the big box retailers and local tire retailers from over 120 distribution locations across the US and Canada. The Client has over 3,000 employees across its North American Distribution Network.

Business Challenge

The Client has implemented Oracle E-Business Suite (EBS) for its US operations and has recently upgraded to R12.

With the acquisition of the largest tire distributor in Canada, the Client is now embarking on an ambitious project to migrate its Canadian business onto the corporate IT platform.

The Canada implementation project consisted of replacing the existing legacy systems with Oracle's E-Business Suite which will be a single global R12 instance with multi org, multi-language and multi-currency capabilities.

Business Solution

The project initial step was to work with the Canadian Business Stakeholders to understand their business requirements. Existing business processes were mapped against the standard Oracle business process flows to determine if the process or the application needed to be modified to meet the business requirements.

Radix Bay worked with the business to review their Master Data (Customers & Vendors) and convert into Oracle R12 and integrate other systems with Oracle. Radix Bay worked with the business to understand the existing EDI processes to interface data between client and vendors to conduct day-to-day business transactions. Radix Bay mapped these processes to Oracle R12 and modified the EDI processes to work with the standard Oracle processes. Lastly, Radix Bay has been tasked with modifying reports, forms and workflows to meet the business requirements and increase the adoption of Oracle R12 in the Canadian Division.
